Mateo Filip

Frontend & Design Engineer

(+54) 9 3543-624861 | mateofernandofilip@gmail.com | Córdoba, Argentina | LinkedIn | Portfolio

Frontend Engineer with production experience shipping polished products. Focused on component architecture, design system coherence, and the performance details that separate good UIs from great ones. Comfortable owning the full frontend stack — from API integration to pixel-level polish — and working closely with sales, product and design to make technical decisions that serve real users.

Experience

Frontend Engineer — **Jul '22 – Aug '24**
Google — **Remote**

- Built and owned production-grade internal web applications used across multiple teams globally, taking features from design handoff to deployment independently.
- Drove frontend architecture decisions – component decomposition, state management patterns, and performance budgets – that kept applications maintainable as they scaled.
- Partnered directly with product and engineering stakeholders to scope, prioritize, and ship tooling that measurably improved team workflows, reducing critical tools' loading times by up to 60%.
- Authored technical documentation that became the adoption reference for internal tools, lowering onboarding time for new contributors.
- Championed usability and accessibility standards in a production codebase used at corporate scale, balancing engineering constraints with real user needs.

Freelancing & Independent Work — **Sep '24 – Present**
Self-Directed — **Remote**

- Took a deliberate break to focus on personal priorities – continued building frontend projects to stay sharp on modern tooling and emerging patterns.
- Delivered frontend and design engineering work on a freelance basis for individual clients and companies, building websites, applications and shipping new features end-to-end.
- Explored Astro, Next.js App Router, and AI-assisted development workflows (Claude, Cursor, Codex, OpenCode) through hands-on projects, bringing those back into active job search.

Skills

Programming Languages: Javascript (ES6+), TypeScript, HTML, CSS, SQL, GraphQL.

Frameworks & Libraries: React, Next.js, Astro, Gatsby, Node.js, TailwindCSS, Sass, Styled Components.

Tools & Platforms: Git, GitHub, PostgreSQL, Supabase, Vercel, Netlify, Claude, Cursor, Codex, OpenCode.

Practices: Component Architecture, Design Systems, Performance Optimization, Accessibility, Design-to-Code.

Interests: Web Accessibility, Coding & Engineering, Sports, Videogames, Books & Novels.

Education & Credentials

Computer Science — **2020**
National Technological University (UTN) — **Córdoba, Argentina**

- Strong foundation in computer science fundamentals and software engineering principles.
- Applied data structures and algorithms to solve complex problems efficiently.
- Experience with object-oriented and functional programming concepts.

Full Stack Development — **Aug '21 – Jan '22**
Henry — **Remote**

- Built responsive web applications using modern frontend frameworks.
- Built and consumed backend services and databases.
- Collaborated in Agile teams using Git and GitHub workflows.

English C2 (Proficient) — **Oct '21**
EF Standard English Test — **Remote**

- Certified English proficiency.
- Advanced English communication – reading, writing, and speaking.
- Ability to work in English-speaking technical environments for international and remote collaboration.
